

CASE STUDY

GERMAN TRAVEL GROUP RELIES ON DEVICE-INTEGRATED FIRE PROTECTION

The FTI Group is a German travel group headquartered in Munich and the third-largest tour operator in Europe. It employs 11,000 people worldwide and sends up to six million people on vacation every year. A big responsibility, especially when it comes to safety. In order to be able to guarantee the uninterrupted distribution of package and module tours at all times, the electrical systems and controls in the control center must be fail-safe and operationally reliable. Preventive fire protection plays an important role here. With 40 control cabinets at the Munich site alone, a fire protection solution had to be found that would function networked, simultaneously and absolutely reliably. FTI Touristik GmbH therefore worked with a JOB sales partner, Meister Automation GmbH (www.amfe.de), and opted for the Automatic Miniature Fire Extinguishing Unit AMFE.

”

The AMFE fights fires
quickly and **without residue** in
the event of a malfunction!

Michael von Bibow,
Head of Facility Management &
Administration, FTI Touristik GmbH

40 mini fire extinguishing units (cylinder with thermo bulb) have been integrated into the control cabinets and automatically trigger an extinguishing process when a defined temperature in the unit is exceeded (sprinkler principle); at the same time, they send a signal to the higher-level fire alarm system. The aim is to fight incipient fires quickly and without leaving any residue - they are detected early and extinguished before they can spread.

„We decided to use the mini fire extinguishers to protect our employees and provide our customers with a reliable service,“ says Michael von Bibow, Head of Facility Management & Administration at FTI Touristik GmbH.

In the event of a fire, damage is limited to the equipment and far-reaching business interruptions can be avoided. For questions about application possibilities or technical details about the mini fire extinguisher AMFE, please contact Rajko Eichhorn Rajko.Eichhorn@job-group.com.
